

# KRUNAL KATHIRIYA

Full-Stack Software Engineer | Frontend Specialist | React · Next.js · Node.js

## SUMMARY

Full-Stack Software Engineer with 2+ years of experience building production-grade web applications. Specialized in React and Next.js frontend architecture with hands-on backend expertise in Node.js, REST API design, and PostgreSQL. Proven track record delivering enterprise-scale systems with measurable performance improvements, scalable API layers, and role-based access control. Currently pursuing MS in Computer Science at DePaul University, Chicago.

## TECHNICAL SKILLS

**Languages:** JavaScript (ES6+), TypeScript, SQL  
**Frontend:** React.js, Next.js, Redux Toolkit, React Query, Tailwind CSS, Material UI, HTML5, CSS3  
**Backend:** Node.js, Express.js, REST API Design, Middleware, Authentication, RBAC  
**Database:** PostgreSQL, MongoDB  
**Tools & Platforms:** AWS S3, Git, GitHub, Vercel, Render, cron jobs, JWT, OAuth  
**Concepts:** SSR, SSG, SEO, Code Splitting, Lazy Loading, Component Architecture, State Management

## EXPERIENCE

**Software Engineer – Full Stack** Mar 2023 – Dec 2024  
*PragetX Technology, Ahmedabad, India*

- Engineered full-stack features across multiple production modules using React, Next.js, and Node.js, improving application stability and reducing regression bugs across 5+ modules by establishing consistent patterns and shared utilities.
- Boosted SEO performance and organic traffic for the company marketing site by implementing Next.js server-side rendering (SSR), dynamic routing, and Core Web Vitals optimizations, resulting in improved Lighthouse scores and higher search rankings.
- Designed and built RESTful APIs with structured routing, request validation middleware, and standardized error handling, establishing clean client-server contracts and accelerating onboarding for new engineers.
- Reduced frontend code duplication and redundant API calls by architecting reusable React component libraries and optimizing server state management with React Query, improving maintainability across 5+ application modules.

**Frontend Developer** Jan 2023 – Mar 2023  
*Ridge Brains Technology, Ahmedabad, India*

- Implemented interactive, data-driven UI features using React and modern JavaScript (ES6+), replacing static pages and increasing user engagement through improved interactivity and responsiveness.
- Standardized frontend component architecture by refactoring ad-hoc UI code into a reusable component library, reducing development time and improving team velocity on subsequent feature work.
- Collaborated with designers and senior engineers to translate Figma wireframes into pixel-perfect, accessible, responsive layouts adhering to WCAG standards.

## PROJECTS

**HRMS Platform** | *React, Node.js, PostgreSQL, Redux Toolkit, React Query, JWT, AWS S3* Live Demo

- Architected and delivered a full-stack Human Resource Management System covering 6+ core modules (payroll, attendance, leave, performance reviews, asset tracking, project management), replacing manual spreadsheet workflows with a unified platform.
- Designed a normalized relational schema in PostgreSQL with a structured REST API layer, enforcing referential integrity and reducing data inconsistencies and HR support overhead.
- Implemented JWT-based authentication and route-level Role-Based Access Control (RBAC) securing sensitive employee data across four distinct roles (Admin, HR, Manager, Employee), eliminating unauthorized access.
- Automated recurring HR workflows using Node.js cron jobs and integrated AWS S3 for document storage; optimized frontend performance with Redux Toolkit and React Query for responsive, low-latency user interactions.

**PragetX Corporate Website** | *Next.js, SSR, SEO* Live Demo

- Led end-to-end development of a production-scale corporate website in Next.js, delivering 50+ pages and 100+ reusable components enabling rapid content expansion without engineering intervention.
- Improved search visibility and page load performance by implementing SSR, dynamic routing, structured metadata, and Core Web Vitals optimizations, measurably increasing organic traffic and search rankings.
- Built a robust backend-integrated contact and lead capture form system with server-side validation and email delivery, improving lead conversion and eliminating dropped submissions.
- Optimized client-side performance through code splitting and lazy loading of components and assets, reducing initial bundle size and improving Time to Interactive (TTI) across all device types.

## EDUCATION

**Master of Science in Computer Science** Jan 2025 – Jan 2027  
DePaul University, Chicago, IL

**Bachelor of Technology in Information Technology** Jun 2020 – Jun 2024  
Silver Oak University, India
