

KRUNAL KATHIRIYA

Full-Stack Software Engineer

SUMMARY

Full-Stack Software Engineer with 2+ years of experience building production-grade web applications using React, Next.js, and Node.js. Experienced in designing scalable APIs, managing client and server state, and implementing role-based systems. Built enterprise-level platform and production-scale applications with focus on performance, maintainability, and real-world workflows. Currently pursuing MS in Computer Science and seeking software engineering roles.

SKILLS

Languages: JavaScript (ES6+)
Frontend: React.js, Next.js, Redux, React Query, Tailwind CSS, Material UI
Backend: Node.js, Express, REST API Design, Middleware
Database: MongoDB

EXPERIENCE

- Software Engineer – Full Stack**

Mar 2023 – Dec 2024*PragetX Technology, Ahmedabad, India*

 - Delivered full-stack features for a production using React, Next.js, and Node.js when the team needed faster iteration, improving application stability and reducing regression bugs across multiple modules.
 - Improved performance and search visibility of the company’s marketing site by implementing Next.js dynamic routing, SEO best practices, and SSR, leading to better core web vitals and higher organic traffic.
 - Addressed scalability and maintainability issues in the backend by designing RESTful APIs with structured routing and middleware, enabling clean client-server contracts and easier onboarding for new developers.
 - Reduced UI complexity and inconsistencies by building reusable React component systems and optimizing data fetching with React Query, cutting duplicate code and lowering redundant API calls across 5+ modules.

- Frontend Developer**

Jan 2023 – Mar 2023*Ridge Brains Technology, Ahmedabad, India*

 - Implemented interactive features using modern JavaScript and React patterns to replace static pages, increasing user engagement and polishing the overall UX.
 - Helped standardize basic component architecture by refactoring ad-hoc UI pieces into reusable components, making it easier for the team to extend the UI.
 - Collaborated with designers and senior engineers to translate Figma/wireframes into pixel-perfect, accessible layouts, strengthening the frontend foundation for subsequent feature work.

PROJECTS

- HRMS Platform (Enterprise Full-Stack System)**

Live Demo

 - Built a full-stack HRMS platform (React, Node.js, PostgreSQL) when the company needed to digitize HR operations, delivering 6+ core modules (payroll, attendance, leave, performance, assets, projects) and replacing scattered spreadsheets with a single integrated system.
 - Resolved inconsistent and duplicated HR data by designing a normalized relational schema and REST API layer, enforcing referential integrity and clear workflows, which significantly reduced data issues and support requests from HR.
 - Addressed security and compliance needs for sensitive employee data by implementing JWT-based authentication and route-level RBAC, ensuring only authorized roles (HR, managers, admins, employees) could access specific resources and eliminating unauthorized access.
 - Removed operational bottlenecks in routine HR tasks by automating recurring workflows with cron jobs and integrating AWS S3 for document storage, while a modern frontend architecture (Redux Toolkit + React Query) improved responsiveness and reduced manual effort for HR staff.
- PragetX Corporate Website (Production System)**

Live Demo

 - Led development and maintenance of a production-scale corporate website in Next.js when the company needed a scalable marketing presence, delivering 50+ pages and 100+ reusable components that enabled non-technical teams to rapidly launch new content.
 - Faced with poor search visibility and slow initial load times, implemented dynamic routing, SEO best practices, and server-side rendering (SSR), which improved core web vitals and boosted organic traffic and search rankings. .
 - Addressed low lead conversion from static contact forms by building a robust form system with backend email integration and validation, ensuring reliable enquiry capture and reducing dropped or lost submissions.
 - To enhance user experience on content-heavy pages, optimized performance using code splitting and lazy loading of components/assets, reducing bundle size and improving page load and interaction times across devices.

EDUCATION

- Master of Science in Computer Science**

Jan 2025 – Jan 2027
DePaul University, Chicago, IL
- Bachelor of Technology in Information Technology**

Jun 2020 – Jun 2024
Silver Oak University, India
